

Audience Behavior & Engagement Analysis

Q1 2025 Deep Dive | Data Science Team

Date: April 30, 2025 | Classification: INTERNAL — CONFIDENTIAL

Key Findings

Analysis of 6,000+ watch events in Q1 2025 reveals distinct audience behaviour patterns across demographic segments. The 25–34 age group accounts for the largest share of completed views and has the highest correlation with Premium subscription upgrades following content consumption. Mobile is the dominant viewing device across all demographics, representing 48% of all sessions.

Genre-Segment Affinity

Action and Sci-Fi genres have the strongest affinity with the 18–34 male segment, with completion rates exceeding 80% for top titles. Drama content resonates most strongly with female viewers aged 35–54, who also leave the highest average review scores on the platform. Documentary content skews toward older, higher-income subscribers who show strong loyalty and the lowest churn rates.

Comedy has the broadest age distribution but the lowest depth-of-engagement metrics. Average watch session for comedy titles is 42 minutes versus 78 minutes for drama and 91 minutes for action. Comedy viewers are also the least likely to leave reviews or complete films. This pattern suggests comedy serves primarily as a light discovery channel rather than a retention or monetisation driver.

Device and Session Patterns

TV viewing, while accounting for only 22% of sessions, correlates with the highest completion rates (74%) and the longest average session duration. Premium subscribers show a 2.1× higher rate of TV-device usage compared to Free tier subscribers. This suggests TV access may function as a retention signal — subscribers who watch on TV are more engaged and less likely to churn.

Trending Analysis: Stellar Run

Stellar Run exhibits a characteristic viral growth pattern: slow initial uptake in January, followed by a sharp inflection point in mid-February 2025 coinciding with organic social media discussion and two high-profile influencer reviews. March 2025 views exceeded January views by 180%, with no corresponding increase in marketing spend. The title's word-of-mouth coefficient is estimated at 1.4, meaning each viewer generates on average 1.4 additional views through recommendation behaviour. This is the strongest organic growth signal observed in the platform's history.

Recommendations for Q2 Audience Strategy

(1) Launch a referral programme targeting Stellar Run's active viewers, leveraging their demonstrated recommendation behaviour. (2) Design a Comedy genre intervention: either reposition comedy as a free-tier acquisition funnel explicitly, or commission a premium comedy format with higher production values targeting an older demographic. (3) Invest in TV app experience improvements — the device most correlated with engagement and retention is the most under-served in product development. (4) Build a dedicated content vertical for the 35–54 female segment, which consistently produces the highest review scores and strongest completion rates across all genres.
