

StreamVision Content Roadmap — 2025 H2

Strategic Content Investment Plan | Approved April 2025

Date: April 25, 2025 | Classification: INTERNAL — CONFIDENTIAL

Strategic Direction

Following Q1 2025 performance data, the Content Strategy team has approved an increased allocation toward Action, Sci-Fi, and Drama productions for H2 2025. This reflects both the strong audience response to existing titles in these genres and the higher lifetime value of subscribers acquired through such content. Comedy investments will be restructured, with a focus on premium-tier positioning rather than broad-audience Free-tier appeal.

Greenlit Productions — H2 2025

Project Nova (Action/Sci-Fi): A direct follow-up to Stellar Run leveraging the established IP. Expected to capitalise on the title's momentum and existing fanbase. Production starts July 2025; target release December 2025.

The Quiet Shore (Drama): A critically-positioned drama targeting the 35–54 female demographic identified as high-value in Q1. Co-production with an international partner to reduce risk. Target release October 2025.

Sector 9 (Sci-Fi): Standalone science fiction film with high production values aimed at the 25–34 core demographic. Target release November 2025.

Comedy Strategy Revision

Based on Q1 data showing comedy's low ROI and weak completion rates, the roadmap de-prioritises broad comedy productions. One premium comedy special is planned for Q4 2025 with a significantly reduced budget, targeting the 18–24 demographic as a subscriber acquisition mechanism rather than a revenue driver. All future comedy investments will require a signed distribution agreement before greenlight approval.

Regional Content Strategy

Following strong engagement from Mumbai and Southern cities, the roadmap includes two regional language productions for H2 2025: one Tamil-language thriller targeting the Chennai and Bangalore markets, and one Marathi drama for the Mumbai/Pune corridor. These are expected to drive Premium conversion in markets currently under-indexed relative to their economic potential.
